# Meet Pixie

# Why would we need a miniHPC

- Hardware less abstract.
- Real system are busy doing actual research (85 - 95%) load on systems).
- Fear amongst learners that they are going to break the multi-million system they are playing on.
- Resource limits more apparent.
- More control over the environment.
- No need to have accounts on a real HPC.
- Own access point, so no need to get people on university network.

# Why needs doing

- Scripting/automating installation
- Documentation (building instructions etc)
- Adapting lessons
- ...
